

For any condition, especially diabetes, it is very important to take your medicines as directed by your doctor. This helps you to have better control of your diabetes and to prevent and delay long term issues.

In order to empower you to have better control of your diabetes, IU Health has made significant improvements to the 2012 IU Health Pharmacy Benefits.

Beginning January 1, 2012, we are providing many diabetic, blood pressure, and cholesterol control medicines at no copay. This benefit applies to those employees (and their dependents) who meet the following criteria:

- Enrolled in a non-high deductible health plan (HDHP)
- Diagnosed with diabetes
- Tier I employees (fulltime <\$32,496 base pay)
- At IU Health Retail Pharmacies

We want to provide tools to help you become healthier and reach your goals. This program should help ensure that you are able to take your diabetes and related medicines each and every day.

Taking your medicine as directed by your doctor helps increase the quality of your life. With some long-term conditions such as high blood pressure and high cholesterol, you may not feel bad day-by-day, but you should keep taking your medicines the same way each day. If not taken correctly, they are not as effective at preventing and treating your condition, and severe complications are more likely.

Please see the list of medicines that are fully covered at the IU Health Retail Pharmacies and mail order with no copay to you. For the free medicines, you only need to take your prescriptions to an IU Health pharmacy to be filled. This benefit is already built into our system so you get your free medicine without any further questions or explanations.

If you have any questions about medicines (on or not on the list) that you take, please call 317-963-3345 to talk with a pharmacist who can help with any prescription needs.
